

Scenario: You are a college student who can not keep track of all his online classes. Due to this you can not schedule plans because you do not know when you have class. So, you download this app that notifies you when you have a class.

Task 1: Click the notification to let the app know you are attending to class.

Task 2: Navigate to your schedule.

Task 3: Find out how to get to your class.

What I need to change on my application:

- Add an attending button
- Have a back button
- Have a way to put your schedule in
- Have a way to link your class

What I need to keep:

- Keep the schedule set up
- Keep how the notifications remind you
- Keep overall app set up
