Bailey Mook
Storyboard

Oliver usually wakes up pretty late compared to the usual. Because he always wakes up late he is always missing class work.
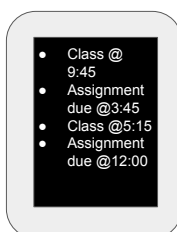

A friend told Oliver about this app that has your class schedule on it so he would not miss a class.
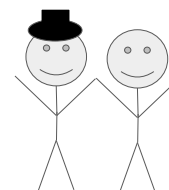

The next day Oliver wakes up to this loud ringing sound. Notifying him that a class is about to start.

Class
CSCE @
9:45

Blackboard

Oliver opens the notification and it notifies him what class he has and what website he has to attend.

- Class @ 9:45
- Assignment due @3:45
- Class @5:15
- Assignment due @12:00

The app allows Oliver to see what is due during the day so he can coordinate plans with others. It also allows him to see when he has to attend a class.
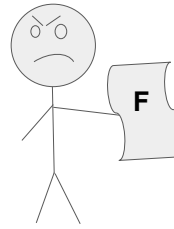

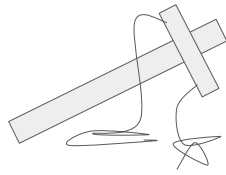

Now that Oliver has the app he can freely spend his time as he wants. He can hang out with friends and he can sleep in.
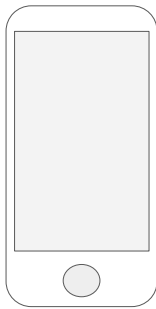

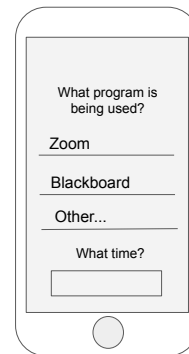

Storyboard by: Colson Mosley

Nick is a UofSC student. Today he is completely online, and working from home. However, there was a recent storm that knocked out cellular service. He normally uses cell service for his meetings, as his wifi is terrible, leaving him with little backup options.
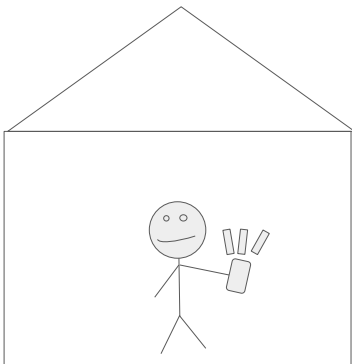

Because of the damage, he wasn't able to get the required assignment in on time or attend the meeting for that day, because he couldn't remember the program the class was using that day to run the meeting. He managed to log into a meeting program after 20 minutes of waiting, but it was the wrong one, and he was too late to try again.
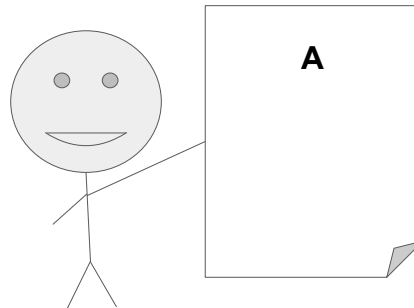

Nick decided that, in order to ensure this didn't happen again, he was going to get an app that could tell him what program and assignments are being used. His teacher recommended one for him.

What program is being used?

Zoom

Blackboard

Other...

What time?

This app already had class codes and links to programs included. This way, when a notification comes through, pressing it would instantly take you to the corresponding class meeting.

After a hurricane at his house a few weeks later, Nick is in a similar situation to the one he was found in earlier. He only has about 30 minutes before his class meeting begins, and a new program is being used as a trial.

A

Nick uses the app to instantly begin logging in to the meeting. He throws a shirt on and takes out his notes while the program and meeting loads up. It loads two minutes before it begins, and he manages to get the notes and complete the assignment on time.
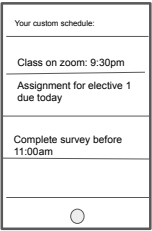

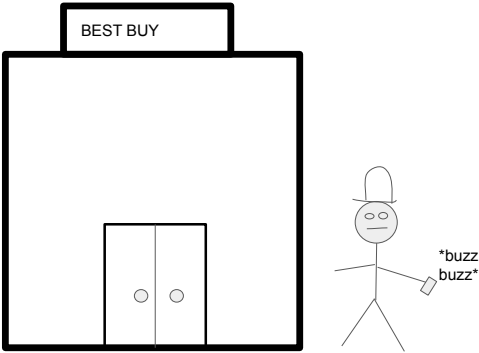

BEST BUY

Johnathan has to wake up every morning at 8:00am to get to his part time job at best buy. He's also a student at UofSC and has many online classes due to the current pandemic. Some of these are synchronous and some of these are asynchronous which is beginning to confuse John and make him stress. He often mixes up times and due dates up because of the chaos that are classes.

Johns friend Ron was recently struggling to remember which classes would meet on zoom, blackboard, or one of the other many meeting programs classes have been using. His solution was downloading an app that was designed to minimize the stress and bring some order to the chaos called The Class Notification App.

Your custom schedule:

Class on zoom: 9:30pm

Assignment for elective 1 due today
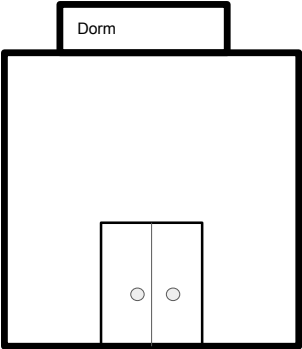

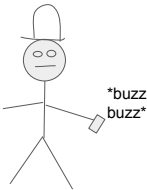

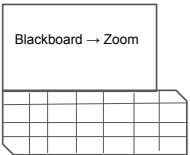

Complete survey before 11:00am

Ron helped John set up a custom schedule with custom notifications so that he can have some more order in his day.
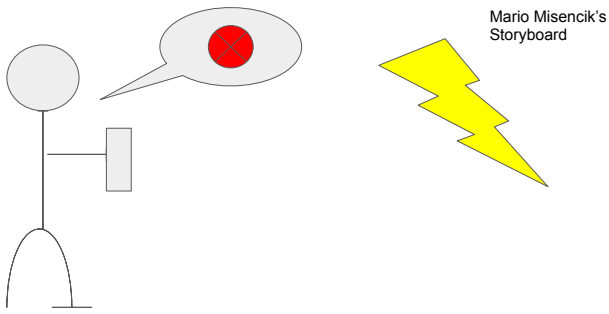

BEST BUY

buzz buzz

John was working at Best Buy at his typical times when he all of a sudden got a notification from the app notifying him that he had a survey for one of his CSCE classes. John was able to make sure the assignment was done in between him restocking the latest iPhone's due to the new app he installed.
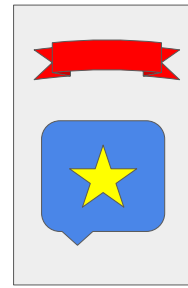

After getting a notification about his class at 9:30pm John now knows that the professor is switching class over to zoom. The app also informed him that the professor is giving a quiz online today. Due to the app John now doesn't have to panic about this information. It informed him in a timely manner and now he has all the time in the world to prepare for his 9:30 class.
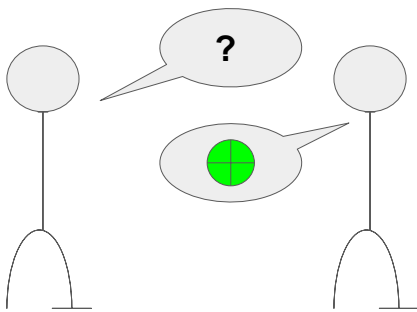

Blackboard → Zoom

buzz buzz

Dorm

No longer will John have to go to work stressed or come home stressed out, all of his worry about missing assignments or fumbling around programs being late to a class are no more. John can confidently go about his day now knowing that he will have plenty of time for his classes.
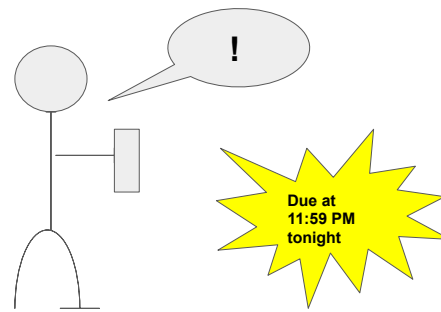

When it comes to classes, Tyson would much rather prefer in-person classes. However, when he has no other choice but to take online classes, he never has access to a well-designed app that can help him stay on top of important things.
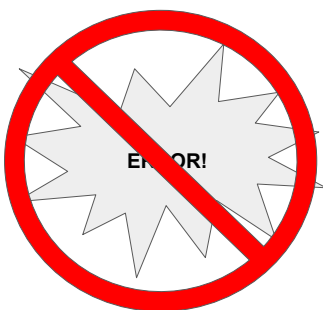

For his new class, his professor has him install a communication app for the class.

The app allows Tyson to openly communicate with other students in the class, the professor, and the TAs.

Due at 11:59 PM tonight

The app sends various notifications to Tyson, reminding him that certain assignments are due.

ERROR!

And the app's user-friendly and simple interface makes sure that Tyson has no difficulty communicating with the class.

Now, Tyson has everything he needs to succeed in his online classes. He doesn't even mind online classes anymore!
